SUMMARY

Full Stack Software Engineer with 5+ years of experience building production web and mobile applications with React, Next.js, TypeScript, and Node.js. Led multiple 0→1 products from architecture through launch, including a global booking platform generating \$1M+ in annual revenue. Experienced in full-stack application architecture, frontend development, REST API design, data-intensive systems, and building scalable products across customer-facing and internal operational workflows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), HTML5, CSS3

Frontend: React, Next.js, React Native (Expo), Redux Toolkit, RTK Query, TanStack Table

Backend & APIs: Node.js, REST APIs, JWT Authentication

Databases & Cloud: MySQL, MongoDB, AWS S3, GCP

Testing: Jest, React Native Testing Library (RNTL), Playwright, Detox

Tooling & CI/CD: Webpack, GitHub Actions

EXPERIENCE

Zymebalanz LLC | Santa Clara, CA | **Software Engineer**

May 2022 - Jun 2026

Owned application architecture and cross-platform product development across patient-facing web, field mobile, and internal operations systems.

Internal Billing & Operations Platform (0→1) – Next.js / React / TypeScript / Node.js

- Led the 0→1 development of a full-stack billing and operations platform supporting transaction management, provider payouts, financial adjustments, and enterprise reporting across internal teams and external service providers.
- Designed and built Node.js REST APIs for transaction querying, payout management, financial adjustments, and reporting, with server-side pagination, filtering, and sorting across 10K+ transaction records.
- Designed and implemented a multi-tenant RBAC and data-access model for finance teams, operations managers, and external vendor organizations, enforcing role-based permissions and preventing cross-tenant data exposure.
- Built end-to-end financial workflows for transaction auditing, reconciliation, adjustments, and reporting, including secure XLSX/CSV exports and PDF generation, replacing manual spreadsheet-based processes.

Global Patient Booking Platform (0→1) – Next.js / React / TypeScript / Redux Toolkit

- Led the 0→1 development of a global patient booking platform, defining frontend architecture and building multi-region scheduling, onboarding, payment, and fulfillment experiences that generated \$1M+ in annual revenue.

- Designed timezone-aware scheduling flows for cross-region bookings, resolving differences between patient and service-location time zones to ensure consistent availability and appointment times.
- Built complex self-service booking workflows integrating Stripe/PayPal payments, SMS authentication, compliance requirements, and scheduling, enabling patients to complete the service lifecycle with minimal operational intervention.
- Built real-time appointment tracking and live field-service location experiences, giving patients end-to-end visibility from booking through service fulfillment.
- Modernized frontend data architecture by migrating legacy Redux/Axios flows to RTK Query, centralizing API state management, caching server data, and reducing redundant network requests.

Phlebotomist Field App — React Native / Expo

- Re-architected a legacy React Native prototype into a modular, reusable component architecture supporting appointment management, logistics scanning, specimen handling, and field-service workflows.
- Redesigning calendar data fetching from bulk-loading to on-demand per-day queries, reducing client memory usage, unnecessary API traffic, and improving calendar responsiveness.
- Built real-time operational workflows adopted by 20+ healthcare service providers and 100+ field professionals, contributing to a 50% reduction in operational cycle times.

Engineering Quality & Developer Productivity

- Established automated testing across web and mobile applications with Jest, React Native Testing Library, Playwright, and Detox, achieving 90%+ code coverage and comprehensive automated test coverage across critical business workflows.
- Built GitHub Actions CI/CD pipelines with automated test gating for PRs and deployments, improving release reliability and supporting consistent weekly production releases.

EDUCATION

B.S. Software Engineering — San Jose State University

May 2021

Google UX Design Professional Certificate — Google / Coursera

Aug 2023
